

[aft-global.com](http://aft-global.com)

AFT is a global supplier specialized in stock preparation, screening, refining and paper machine approach flow systems. With over 100 years of experience, we offer expert solutions that help mills produce more while using less energy, water and chemicals. We take an upgrading approach to improve existing mill operations or respond to changes in fiber supply or paper grades. Our solutions are tailored to the customer's furnish, their application, and the end-product being produced in order to optimize their return on investment.

## Performance Components

### Screening and Refining

## Capital Equipment and Systems

### Stock Preparation and Approach Flow

### Screening components and equipment

AFT offers the widest selection of screen cylinders in the industry for all brands, models and sizes of screens. Their high efficiency cylinders have the best slot width accuracy and precision for reliable performance over the life of the cylinder.

World leader in energy efficient rotors, producing rotors for more than 400 screen models with typical energy savings over 30%.

Fastest growing screen supplier with over 600 screens sold worldwide, AFT offers screens for headbox applications, coarse/fine screening, and reject fiber recovery screening, with ease of maintenance and lowest power consumption.

## Refining components and equipment

Finebar® refiner plates and fillings began a revolution in ultra-low intensity refining and remain #1 in design flexibility. These customized patterns can last up to 3 times longer than cast or fabricated plates for ease of maintenance and less downtime.

Combined with Finebar® technology and IoT integration, AFT's MaxEdge™ refiner series delivers optimized performance with lifetime operational efficiency and reliability.

## Approach flow equipment and systems

AFT's POMp™ degasser provides a compact and efficient solution for air removal at the beginning of the white water handling process, requiring fewer and smaller silos and tanks downstream.

The POMix™ stock processor is a "just-in-time" option for the paper machine wet end, providing gentle blending with high intensity and high-shear mixing in a compact unit.

**Real-world, proven solutions to your mill's most challenging fiber processing issues – that's what you expect from AFT.**
