SHOE PRESS BELT PRODUCT LINE

Ichiriki Series

Advanced function resins that achieve high performance and long life.

Ichiriki is the belt made of multi-functional resin. The excellent resin is coated on both felt and shoe sides. This belt works in terms of resisting against cracks, abrasion, chemical damage and shoe-side delamination. This multi-resistant resin ensures the belt achieves long life. We can supply to all sizes.

IX-F

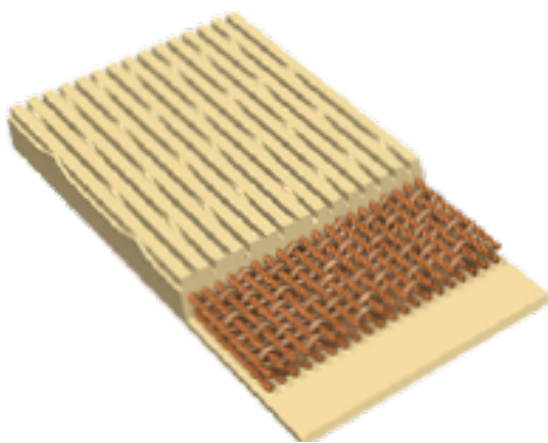

IX-F is our standard quality belt. This belt has the advantage in resistance against wearing and cracking. Depending on the machine operating condition, 'anti-wearing type' or 'anti-cracking type' can be selected.

Groove specs that suit needs

Can select various groove specifications, to suit the dewatering form and felt specifications. Ichikawa uses its deep knowledge of felts to deliver high performance by optimal combinations of felts and belts. For groove specifications, we have continuous grooves and discontinuous grooves of various shapes, to match the dewatering form.

- **Intermittent groove**

Our intermittent groove maintains superior squeezing characteristics. It reduces backwater during fast machine speeds and slow machine speeds.
